Charles checklist — re-entry (manual checkoff)

Last synced: 2026-07-30

Created: 2026-07-28 16:58
Purpose: The **one** place you walk beginning → end and mark **what you personally did**.
Not this file: Agent "already done" tables in `model_OPORD.md`, doc 03, COMPASS stub, or the hero reset plan. Those are **project/agent status**. This file is **your** progress.

How to use

1. Work **top to bottom**.
2. Change `[ ]` → `[x]` only when **you** finished that row.
3. Fill **Proof** with a path, date, or one-line note.
4. **Do not rebuild** the empirical hero (Layer A panel) unless you choose to later.
5. **Do re-run** generative Pass A and Pass B yourself so you own the sim story.

Companion reads (check when true): docs `00`–`03`, then **`04_Pass_A_and_Pass_B_in_Plain_English.md`** **before any sim redo**. Optional depth: hero reset plan, Three Layers memo, `Model.pdf`. After doc 04, optional shorthand: `540_READ_ME_SIM.md`.

---

0. Orientation (reading)

Done	Step	Proof (you fill)
[ ]	Read `00_READ_ME_FIRST.md`	
[ ]	Read `01_The_Problem_in_Plain_English.md`	
[ ]	Read `02_Three_Kinds_of_Model.md`	
[ ]	Read `03_Three_Day_Basketball_Focus.md`	
[ ]	Read hero reset plan (optional depth)	
[ ]	Read Three Layers memo (optional card)	
[ ]	Skim `Model.pdf` (your slide)	

---

1. Self-test (no code) — you're oriented when all pass

Say each out loud. Check only when you can, without hedging.

Done	Step	Proof
[ ]	**Hero:** talent baseline (own A) vs hero (poolq_loo); cliff at elite end is **outcome**, not "NBA ignores talent"	
[ ]	**Binding:** environment `L_net = B−D` ≠ advancement; advancement = **score** (`S_i`, λ) then **select** (top K)	
[ ]	**Nest:** `S_i = A_i + λ(B−D)` with Alex v1 `(B−D)=−L_C` ⇒ `S_i = A_i − λ·L_C`; knockout λ=0 ⇒ `S_i = A_i`	
[ ]	**Hero shape honesty:** peak ~bin 12, high/wobble 13–15, **cliff at bin 16** (not "only bin 16 ever falls")	
[ ]	Read limitation sentence in doc 03 once, cold	

---

2. Skip — empirical hero (Layer A)

You are **not** rebuilding these. Treat as locked inputs.

Status	Artifact	Path
Use as-is	Hero PNG	`re_entry/HEROs_and_PASSes/HERO_inverted_u_empirical_ppm_poolq_loo_16quantile_winsor0199_min20_2011.png`
Use as-is	Hero CSV	`re_entry/HEROs_and_PASSes/PASS_A_binned_draft_rate_empirical_ppm_poolq_loo_16quantile_winsor0199_min20_2011.csv`
Optional open	LPM coefs	`re_entry/HEROs_and_PASSes/PASS_A_lpm_hero_coefficients.txt`

Done	Optional (only if you want)	Proof
[ ]	Open hero PNG + CSV; confirm peak ~12 / cliff at 16 yourself	

2b. Bridge — read before any sim redo (required)

Stop. Do not open the 540 notebook expecting it to teach Pass A/B. Read the plain-English bridge first.

Done	Step	Proof
[ ]	Read `04_Pass_A_and_Pass_B_in_Plain_English.md`	
[ ]	Can say in your own words: hero = empirical; Pass A/B = simulated league	
[ ]	Can say what Pass A changes vs what Pass B changes	
[ ]	Optional after 04: skim `sports/540_READ_ME_SIM.md` (shorthand OK now)	

3. Sim redo — Pass A — you run this

Full explanation: doc **04**. Short reminder: same fake league setup and same top-K; one arm scores on ability only; the other puts congestion in the score.
What you run: `python sports/scripts/hero_model_reset_bundle.py` (from repo root).
Notebook: `sports/540_three_step_sim.ipynb` is optional display / can call the scripts — it is **not** the full simulator by itself.

Done	Step	What to do	Proof
[ ]	Run Pass A bundle	From **repo root:** `python sports/scripts/hero_model_reset_bundle.py`	date + exit 0
[ ]	Inspect talent-only CSV	`HEROs_and_PASSes/PASS_A_generative_knockout_talent_only_16quantile.csv` — monotone rise?	
[ ]	Inspect congestion CSV	`HEROs_and_PASSes/PASS_A_generative_knockout_congestion_16quantile.csv` — elite compression vs talent-only?	
[ ]	Inspect side-by-side PNG	`HEROs_and_PASSes/PASS_A_inverted_u_side_by_side_empirical_vs_generative.png`	
[ ]	Read summary + caption	`PASS_A_generative_knockout_summary.txt`, `PASS_A_side_by_side_caption.txt`	
[ ]	One-sentence claim (yours)	Write: what Pass A proves / does **not** prove	

Pass A done for you when: you ran the script, looked at both knockout arms + PNG, and can state the claim without reading notes.

4. Sim redo — Pass B — you run this

Full explanation: doc **04**. Short reminder: score + top-K fixed; only assignment assortativity (ρ) / sort-and-chop changes.

Done	Step	What to do	Proof
[ ]	Run Pass B bundle	From **repo root:** `python sports/scripts/540_rho_ablation_bundle.py`	date + exit 0
[ ]	Inspect arms	`HEROs_and_PASSes/PASS_B_generative_*_16quantile.csv` (low / moderate / high / very_high / sort_chop)	
[ ]	Inspect PNG	`HEROs_and_PASSes/PASS_B_rho_ablation_selection_by_poolq_loo.png`	
[ ]	Read summary + caption + README	`PASS_B_rho_ablation_summary.txt`, `PASS_B_rho_ablation_caption.txt`, `PASS_B_README.txt`	
[ ]	One-sentence claim (yours)	Sorting can matter for pools; **not** the minimal congestion-in-score proof; not hero bin-for-bin	

Pass B done for you when: you ran it and can separate Pass A vs Pass B in one breath.

5. Alex magnitude — predictive importance (Paper Directions 14)

Full spec: `05_Alex_Magnitude_Spec.md`
Transcript: `transcripts/20260730_Paper_Directions_14_otter_ai_transcript.docx`
Reminder: Hero ventile plot ≠ this task. Fit **Model A** (ability + poolq_loo + poolq_loo²) vs **Model B** (ability only); compare predicted draft probabilities and overall predictive gain.

Done	Step	What to do	Proof
[ ]	Read spec + transcript skim	Doc **05**; confirm counterfactual = λ off in **prediction**, not rewound career	
[ ]	Run magnitude script (when exists)	From repo root: `python sports/scripts/hero_magnitude_predictive_comparison.py` (TBD)	date + exit 0
[ ]	Inspect model comparison	`HEROs_and_PASSes/MAGNITUDE_model_comparison.txt` (when written)	
[ ]	Inspect per-person gaps	CSV: $\hat{p}_i^{\text{full}}$, $\hat{p}_i^{\text{ability}}$, |Δ| by ability ventile	
[ ]	One-sentence claim (yours)	"Roster in the model improves prediction by ***; largest at top ability / few slots because*** "	

Done for you when: you can answer Alex's "how much better is prediction with roster?" with numbers, not only the Hero curve shape.

6. Optional — see the pipeline in the notebook

Done	Step	What to do	Proof
[ ]	Open `sports/540_three_step_sim.ipynb`	Paths + display of exports; set `RUN=True` only if you want re-run from cells	
[ ]	Skim `tier1_pool_assignment.py`	Find: `soft_assign` / `assignment_rho`, `assign_selection`, `choose_selected`	
[ ]	Skim `tier1_sim_config.py`	Find: `ASSIGNMENT_RHO`, score mode, `N_SELECTED`, viability θ/γ	

7. Package for Alex (when sims feel like *yours*)

Done	Step	What to do	Proof
[ ]	Assemble packet	`Model.pdf` + Pass A side-by-side PNG + Pass B PNG (optional) + limitation sentence (doc 03)	
[ ]	Dry-run the talk	2–3 min: layers → Pass A knockout → (optional) Pass B → limits	
[ ]	Send / meet	Email or calendar	date

8. Explicitly not on this checklist (park guilt)

Do **not** check these off here; they are out of scope until you decide otherwise:

- Rebuild empirical hero from `530`
- Bin-for-bin LOO match as a gate
- Rivanna / faithful historical sweeps
- Preferential attachment on
- Army / tenure figures
- Nesting note / Pertinent Thoughts / old 14-doc stack
- Fixing every "bin 16 only" prose line (nice polish; not blocking)

Park list: `PARKED_FOR_LATER.md`.

Where other "done" lists live (ignore for checkoff)

File	What it is
`model_OPORD.md`	Ops order / agent phases (archive, ρ wiring, exports)
`03_Three_Day_Basketball_Focus.md`	"72-hour bar" + project status
`20260727_COMPASS_sim_reentry_status.md`	COMPASS stub
Hero reset plan §7	Plan sequence status

Rule: If a box here is unchecked, **you** still have work — even if another doc says "Done."

Next action right now

If sections **0–2** are checked: read **§2b / doc 04**, then start **§3** (Pass A script).
When stuck: return to `00_READ_ME_FIRST.md`, then come back **here**.
