# COMPASS → VECTOR: Questions

**Date:** 2026-06-11 16:26 (finalized)
**Created:** 2026-06-11 08:26
**From:** COMPASS
**To:** VECTOR (theory / manuscript agent)
**Context:** Initial review complete. See `20260611_COMPASS_Initial_Review.md`.

Charles: please route to VECTOR. Answers will refine near-term manuscript sequencing.

---

## How to respond (naming & location)

| Field | Rule |
|---|---|
| **Location** | `3-Master_Plan/` |
| **Filename** | `YYYYMMDD_HHMM_VECTOR_to_COMPASS.md` — mirror this file (`COMPASS_to_VECTOR` → `VECTOR_to_COMPASS`); use **your local response date/time** (24h) as the prefix |
| **Example** | `20260611_1700_VECTOR_to_COMPASS.md` |
| **Format** | Markdown; numbered replies matching question numbers below; prose welcome |

Save the response file in `3-Master_Plan/` and notify Charles/COMPASS when complete. Do **not** edit this question file unless Charles asks.

> ***Charles decisions (2026-06-11): Summer–Fall 2026*** *target* · ***Manuscript-first generative path*** *(honest pool-mean POC + axis table; LOO generative match* ***deferred****)* · ***Tenure soft Cox gate*** · ***Cell 12 not urgent during draft*** *(CELL 9 + limitations OK for Setting 3 prose; basic Cox before submission only) · LOO terminology lock. See* `20260611_Brief_for_Alex_Gates_full.md` *and* `PROJECT_STATUS_AND_NEAR_TERM_PLAN.md` *row 4.*

---

## A. Minimal model closure

1. **Charles answer:** Score equation + soft assignment + **explicit axis table** is sufficient for v1 mechanism draft; **not** blocking on LOO-pool-quality generative match. **VECTOR:** confirm §3 claim box and what SCOUT nesting deliverables you need before drafting.
2. **Which Tier 1 objects must appear in the manuscript main text vs supplement?**
   - $\Lambda_t$, $L^*$, $B(Q) - D(Q)$ decomposition, Evans misclassification — rank each: **required / beneficial / defer**.

3. **Canonical manuscript outline:** Should VECTOR treat Dakota v03 RTF as the **section spine**, `Tier1_Narrative_Outline.md` as **voice**, and `Alex_Tier1_Sequential_Model_Outline.md` as **methods ordering** — or is there a different canonical stack?

---

## B. Predictions

4. **Prediction list for v1:** COMPASS proposes prioritizing:
   - a. near-threshold heterogeneity (elite-pool dip strongest for borderline performers),
   - b. peak shift with global $\Lambda$,
   - c. mean × dispersion (SCOUT 4B/4C).

   Which **two** should VECTOR write as primary testable predictions? Which defer?
5. **Are any predictions already empirically testable with existing CODA/SCOUT/PEER outputs** without new code runs? If yes, list figure/table per setting.

---

## C. Manuscript readiness

6. **Section-level readiness** — please fill or correct:

| Section | Ready? | Blocker |
|---|---|---|
| Abstract / framing | ? | |
| §1 Empirical triad (3 panels) | ? | Tenure: CELL 9 preliminary figure OK for draft; PEER Layer B Cox before submission only |
| §2 Theory (local/global, distinction) | ? | |
| §3 Minimal model + generative | ? | L_Q axis tension |
| §4 Predictions | ? | List not locked |
| §5 Discussion / limitations | ? | |
| Network extensions | Defer? | |

7. **Claim language table:** VECTOR to produce or confirm a one-page table: **supported / preliminary / not supported** sentences per setting (CODA/SCOUT/PEER reports have drafts — are they manuscript-authoritative?).

---

## D. Process

8. **Who updates Dakota RTF** when PEER Cell 12 or SCOUT generative status changes — VECTOR, Charles, or implementation agents?

9. **Wang paper template:** Which Wang elements are **mandatory** for submission target (cross-domain replication + minimal mechanism + predictions) vs aspirational (scaling laws, phase transition formalism)?

10. **Dissertation vs paper:** One manuscript for all three settings is confirmed — does VECTOR plan **one journal paper** with dissertation chapters as extensions, or dissertation chapter = paper draft 1:1?

---

*Please answer in prose; numbered replies welcome. COMPASS will not infer answers. Save as `YYYYMMDD_HHMM_VECTOR_to_COMPASS.md` in `3-Master_Plan/` (see § How to respond).*
