

DISPOSABLE — Charles → VECTOR handoff checklist

Purpose: Only what **you** must provide so VECTOR can build the dissertation/defense slide outline. COMPASS fills paths and the questionnaire; VECTOR writes prose after your claims are locked.

Companion (COMPASS prefill): `../VECTOR_work/COMPASS_Dissertation_Core_Deck_Materials_Questionnaire_COMPASS_draft.md`

Flipbook (story authority): `_DISPOSABLE_paper_flipbook_PD30.md`

Original questionnaire (blank template): `../VECTOR_work/COMPASS_Dissertation_Core_Deck_Materials_Questionnaire.md`

Say `anchor` in chat to paste the status block below.

YOU ARE HERE

Step	Task	Status
1	Red-pen flipbook § Slide deck (Acts 0–VI)	🟡 mostly done — open: 1.1, 1.4, 6.2 expand; Act V parked
2	Red-pen figure decks (inventory + talk skeleton)	⬜ Charles — skim after COMPASS regen (2.2 naïve, 3.3 composite, 4.2 G2)
3	Approve or rewrite contribution stub (slide 6.3 / G4)	✅ 6.3 [OK] — VECTOR may polish wording only
4	Five judgment calls (core/backup, locked/provisional, order, diss vs paper, do-not-claim)	⬜ Charles — paste into questionnaire Charles response block
5	Gap register priorities (G1–G5)	🟡 partial — G2 ✅ regen done; G1/G3/G5 still need your priority
6	Confirm origin story (Army first, MBB stand-in, CAC)	⬜ Charles — 0.4 [OK] in flipbook; one explicit “confirmed” line still helps
7	Send VECTOR the package	⬜ blocked on Steps 2 + 4 + 5
—	COMPASS questionnaire prefill	✅ draft ready
—	COMPASS figure/deck fixes (Sep 15)	✅ 2.2 naïve PNG · 3.3 composite · 4.0 intro · 4.1 notation note · G2 PNG · decks regen

Red-pen tally (flipbook Notes column)

Status	Slides
✅ [OK]	0.1–0.4, 1.2, 1.3, 2.1, 2.3, 2.4, 3.1–3.3, 4.0–4.3, 6.1, 6.3
🟡 Open / verify	1.1 (CS+CSS vs code), 1.4 (Cox pop + hazard-ratio explainer), 6.2 (gap slide — needs plain English)
⏸ Parked	Act V entire act (football LOO pedagogy)
🔧 COMPASS fixed from red-pen	2.2 → naïve ability panel; panel 4 ECDF → inventory only

Goal

VECTOR builds the dissertation/defense **slide-placeholder outline** from **your approved story**, not from repo archaeology.

Do not do: Fill the full 15-section questionnaire yourself, rerun analyses, or polish manuscript prose. That is COMPASS + VECTOR.

Step 1 — Red-pen the flipbook claims (required; blocks everything)

Open: `_DISPOSABLE_paper_flipbook_PD30.md` → section **§ Slide deck (claims — Charles red-pen)** (Acts 0–VI).

Do: For every row (0.1 through 6.3), mark one of:

- **OK** — claim is accurate and you would say this to Alex
- **Edit** — rewrite the “Claim” cell in your words
- **Cut** — slide out of core story
- **Gap stays** — leave as open hole (do not fake an answer)

Why VECTOR needs this: This table is the **authoritative talk story**: question → figure → one-to-two sentence conclusion. VECTOR turns approved claims into deck placeholders and later dissertation prose. Unapproved claims are not safe to build on.

Done when: Every Act 0–VI row has your mark. No row left “drafted — Charles red-pen.”

Time: One focused pass (~45–90 min). Acts I–III matter most (Army, basketball, tenure).

Step 2 — Red-pen the two figure decks (required)

Open (PowerPoint or HTML in browser):

1. Full catalog: `_DISPOSABLE_paper_flipbook_PD30_FIGURE_INVENTORY.pptx`

2. Talk skeleton only: [_DISPOSABLE_paper_flipbook_PD30_FIGURE_DECK.pptx](#)

Policy: Inventory = everything germane. Flipbook deck = Acts 0–VI only. Every flipbook figure must be in inventory; inventory can have extra figures the talk does not use.

Do: Skim each slide. Note:

- Wrong figure for that claim
- Wrong axis / label / title
- Missing must-show figure
- “Backup only — not core” (football, legends, etc.)

Done when: Short red-pen list (margin notes or bullets in chat). COMPASS fixes paths/regen; you do not need to edit the build script.

Do not: Rebuild PNGs yourself unless a slide is **blocked** — flag G1/G3 instead. (G2 λ knockout PNG regen  Sep 15.)

After Sep 15 regen, spot-check: Act II 2.2 (naïve ability bars), Act III 3.3 (three-leg composite), Act IV 4.2 (λ knockout sim).

Step 3 — Approve or edit the contribution stub (required for Act VI / G4)

Open: Same flipbook → Act VI → slide 6.3 (“So what? contribution stub”).

Do: Read the draft contribution paragraph. Either:

- **Approve** — “G4 stub OK, VECTOR may polish wording only”
- **Rewrite** — replace with 3–5 sentences in **your** substance (what the dissertation adds vs “we found a curve”)

Why VECTOR needs this: G4 is explicitly **Charles approve** → **VECTOR polish**. VECTOR will not invent your contribution claim.

Done when: One explicit sentence: “6.3 approved” or pasted replacement text.

Step 4 — Five judgment calls only you can make (required; short answers)

Reply to COMPASS (or paste a **Charles locks** block at the bottom of the flipbook) with **one line each**:

#	Question	Your answer format
4a	Core vs backup — Which legs are must-show at defense vs appendix / backup only ?	e.g. “Core = Army + MBB + Tenure + Model + Pass A λ slide; backup = football, legends, Big Fish”
4b	Locked vs provisional — What may VECTOR state confidently vs “current best, not causal identification”?	e.g. “Locked: LOO hero shape in Army CIF; provisional: MBB tail softness; not locked: any causal peer effect”
4c	Narrative order — Is Acts 0→VI the defense order?	“Yes” or “Move X before Y”
4d	Dissertation vs paper — Anything Alex said that differs defense talk from eventual paper?	One paragraph or “same story, paper shorter”
4e	Claims we must not make yet — What would be overreach?	Bullets, e.g. “no causal peer effects; no ‘universal law’; no football as fourth leg”

Done when: Five short answers exist. Charles Locks - 4a - What you listed is correct, but no backup right now, just placeholders for other datasets 4b - The Army HERO shape is locked, the MBB is less convincing but has that definite tendency, the Tenure Info is also reliable, but will get better with more data 4c - I'd like to hear VECTOR's suggestions before deciding 4d - NO.

4e - No specific prohibited claims yet —

Step 5 — Flag open gaps honestly (required; ~2 minutes)

Open: Flipbook → Gap register (G1–G5).

Do: For each gap, mark **blocks defense / nice to have / ignore for now**:

Gap	What it is	Typical call
G1	Army canonical PNGs (Common Access Card / AWS refresh)	“Good enough from sandbox for now” vs “must refresh before defense”
G2	Pass A λ knockout sim PNG	 Regen Sep 15 — pass_b/PASS_B_generative_lambda_knockout_side_by_side.png . You still mark: core vs supporting for defense.
G3	Tenure formal Cox	Supporting vs must-show
G4	Contribution prose	Step 3 above
G5	Common Access Card access	Status only — “when / if / not before defense”

Done when: Each G1–G5 has your priority, not COMPASS’s guess. Charles Locks - G1 I have my CAC card and access now G2 - I think core - we need to keep the model it just isn’t completely utilized yet G3 - Nice to have G5 - I'd like Vector to take his own crack at this wording so that I have contributions from each of you to consider G5 - I have access

Step 6 — Confirm the access / origin story (required; one sentence)

Open: Flipbook → Charles lock — narrative anchor and Act 0.4.

Do: Confirm or edit:

Army showed the phenomenon first; basketball was the working stand-in while Common Access Card access was unavailable; tenure tests portability; when CAC returns, Army leads the deck again.

Done when: “Origin story confirmed” or your edited version pasted once.

Step 7 — Send VECTOR the package (required; ~5 minutes)

You provide:

- 1. Red-penned flipbook markdown (or “all OK except slides X, Y, Z”)
- 2. Figure deck red-pen notes (Step 2)
- 3. G4 approval or rewrite (Step 3)
- 4. Five judgment answers (Step 4)
- 5. Gap priorities (Step 5)

COMPASS provides (not your job):

- Prefilled questionnaire: COMPASS_Dissertation_Core_Deck_Materials_Questionnaire_COMPASS_draft.md
- Tier 1 reading manifest inside that draft
- Regenerated figure decks after your red-pen

Done when: VECTOR has your flipbook + figure notes + locks. Questionnaire draft can ship same day.

What you can skip entirely

Skip	Why
Filling the full 15-section questionnaire from scratch	COMPASS draft exists — you only veto Tier 1 or fill [CHARLES] slots
Hunting repo paths for Army / MBB / tenure code	COMPASS job
Literature lists, Grandchild assign equations, phase maps	COMPASS + VECTOR from canonical docs
Regenerating PNGs / running notebooks	Only if you marked a slide blocked
Writing dissertation prose	VECTOR after claims locked
Big Fish / football / legends deep dive	Backup unless you promoted to core in 4a
Exporting final talk PDF/PPTX (flipbook P3)	Nice for Alex walkthrough; not required before VECTOR starts if markdown + decks are red-penned

Minimum “VECTOR can start” bar

If under time pressure, this is the smallest sufficient handoff:

- 1. Flipbook § Slide deck — every claim OK or edited (6.3 ✓; still need 1.1 / 1.4 / 6.2 resolution or explicit “gap stays”)
- 2. Slide 6.3 contribution — ✓ approved
- 3. One message with 4a–4e (core/backup, locked/provisional, order, dissertation vs paper, do-not-claim)
- 4. G1–G5 priority marks (G2 PNG done; priorities for G1/G3/G5 still open)

Figure deck red-pen (Step 2) — skim regen’d decks once, then VECTOR can start on story while you finish judgment calls.

Suggested order (one afternoon)

- 1. Read Act 0 + Act I claims with Army deck slide open
- 2. Skim _FIGURE_DECK.pptx against those slides
- 3. Acts II–III + inventory deck for extras
- 4. Act VI + 6.3 + gap register
- 5. Paste five judgment answers
- 6. “Ready for VECTOR” message

Thread log

Date	Entry
2026-09-15	Checklist created; COMPASS questionnaire draft companion linked.
2026-09-15	Charles red-pen pass logged: tally table; Step 3 ✓; G2 ✓; COMPASS fixes (2.2, 3.3, 4.x, decks). Steps 2, 4, 5, 6, 7 still open.
