

Parked for later — good work, wrong moment

Purpose: These files remain in the repo. During **re-entry**, treat them as archived in place. Open only when doc `00` sends you here or when you are past the three-day basketball focus.

Park the whole old print stack

Location	Why it exists	Why skip now
<code>3-Master_Plan/Charles_reading_list.md</code> + <code>01_14_</code> numbered docs	Manuscript inking phase (June 2026 return)	Six+ long docs; assumes symbol decoder already read
<code>3-Master_Plan/03_Where_we_are_now.md</code>	COMPASS project status	Cross-domain; tables and locks everywhere
<code>3-Master_Plan/30_Alex_Gates_inform_status_outline.md</code>	Alex comms spine	Long; mixes domains
Agent mail in <code>3-Master_Plan/202606*_*.md</code>	Multi-agent experiment	Correspondence, not tutorial

Park sports shorthand (for now)

Location	Why skip now
<code>sports/documents/Hero_Model_Three_Layers_Memo.md</code>	Too brief without context; duplicates plan in shorthand
<code>sports/documents/Pertinent_Thoughts_Scout.md</code>	Sensitivity notebook for immersed-you
<code>5-Manuscript/05_Model_Nesting_Note_v1.md</code>	Canonical but dense; read after re_entry doc 02

Still canonical on disk (agents use these; you do not need to read them)

- `530_sports_pipeline.ipynb` — builds empirical hero
- `sports/540_READ_ME_SIM.md` + `540_three_step_sim.ipynb` — re-entry sim entry
- `sports/scripts/hero_model_reset_bundle.py` — Pass A (λ knockout)
- `sports/scripts/540_rho_ablation_bundle.py` — Pass B (ρ ablation)
- `sports/datasets/mbb/exports_inverted_u_v0/alex_side_by_side_v0/` — Pass A figure outputs
- `sports/datasets/mbb/exports_inverted_u_v0/alex_rho_ablation_v0/` — Pass B figure outputs
- `3-Master_Plan/re_entry/Model.pdf` — Charles slide summary (Jul 2026)
- `3-Master_Plan/re_entry/model_OPORD.md` — sim re-entry execution order
- `3-Master_Plan/plans/` — plan mirrors for git/Rivanna

Archived (reference only): `sports/archive/` — old 535/537/538/538D notebooks. Do not open as daily workspace. Nothing here was deleted. You are changing **reading order**, not erasing work.

Optional follow-up (not parked guilt — Alex may ask)

Item	When
p calibration to 530	After Pass B sent; not v1 gate
Preferential attachment sweep	After boolean default validated
<code>Hero_Model_Three_Layers_Memo.md</code>	After doc 02 is easy
<code>05_Model_Nesting_Note_v1.md</code>	Manuscript / committee depth

When to unpark

- Unpark the old reading list when:
- Re-entry docs 01–03 feel obvious, not effortful.
 - You are inking Word manuscript sections, not re-learning what the hero is.
 - You want Alex-facing one-pagers again — then refresh the memo from the plan, do not read the memo cold.
