

Parked for later — good work, wrong moment

Last synced: 2026-07-30

Purpose: These files remain in the repo. During **re-entry**, treat them as archived in place. Open only when doc 00 sends you here or when you are past the three-day basketball focus.

Park the whole old print stack

Location	Why it exists	Why skip now
3-Master_Plan/Charles_reading_list.md + 01_ – 14_ numbered docs	Manuscript inking phase (June 2026 return)	Six+ long docs; assumes symbol decoder already read
3-Master_Plan/03_Where_we_are_now.md	COMPASS project status	Cross-domain; tables and locks everywhere
3-Master_Plan/30_Alex_Gates_inform_status_outline.md	Alex comms spine	Long; mixes domains
Agent mail in 3-Master_Plan/202606*_*.md	Multi-agent experiment	Correspondence, not tutorial

Park sports shorthand (for now)

Location	Why skip now
sports/documents/Hero_Model_Three_Layers_Memo.md	Too brief without context; duplicates plan in shorthand
sports/documents/Pertinent_Thoughts_Scout.md	Sensitivity notebook for immersed-you
5-Manuscript/05_Model_Nesting_Note_v1.md	Canonical but dense; read after re_entry doc 02

Still canonical on disk (agents use these; you do not need to read them)

- 530_sports_pipeline.ipynb — builds empirical hero
- sports/540_READ_ME_SIM.md + 540_three_step_sim.ipynb — re-entry sim entry
- sports/scripts/hero_model_reset_bundle.py — Pass A (λ knockout)
- sports/scripts/540_rho_ablation_bundle.py — Pass B (ρ ablation)
- 3-Master_Plan/re_entry/HEROs_and_PASSes/ — Pass A / Pass B / hero gallery outputs
- 3-Master_Plan/re_entry/Model.pdf — Charles slide summary (Jul 2026)
- 3-Master_Plan/re_entry/model_OPORD.md — sim re-entry execution order
- 3-Master_Plan/plans/ — plan mirrors for git/Rivanna

Archived (reference only): sports/archive/ — old 535/537/538/538D notebooks. Do not open as daily workspace.

Nothing here was deleted. You are changing **reading order**, not erasing work.

Optional follow-up (not parked guilt — Alex may ask)

Item	When
p calibration to 530	After Pass B sent; not v1 gate
Preferential attachment sweep	After boolean default validated
Hero_Model_Three_Layers_Memo.md	After doc 02 is easy
05_Model_Nesting_Note_v1.md	Manuscript / committee depth

When to unpark

Unpark the old reading list when:

- Re-entry docs 01–03 feel obvious, not effortful.
- You are inking Word manuscript sections, not re-learning what the hero is.
- You want Alex-facing one-pagers again — then refresh the memo from the plan, do not read the memo cold.
