

COMPASS → CODA: Questions

Date: 2026-06-11 08:26

From: COMPASS

To: CODA (Army / talent agent)

Context: Initial review complete. See [20260611_COMPASS_Initial_Review.md](#) and [CODA_report_to_COMPASS.md](#).

Charles: please route to CODA.

Charles decisions (2026-06-11): Summer–Fall 2026 manuscript target · Army 525/TB-stratify/pool audit **deferred** unless Charles or Alex elevates (CODA parallel track **still open** — §B below). See [PROJECT_STATUS_AND_NEAR_TERM_PLAN.md](#).

A. Manuscript deliverables

1. **Which Army figures are manuscript v1 canonical?** List notebook cell, run profile (e.g. 19_1), and output filenames for:
 - Primary inverted-U CIF bar panel
 - Cox partial effects / HR table
 - Any secondary figure VECTOR should include
2. **TB-stratified CR add-on:** For manuscript v1, should own-TB tertile panels be **included**, **supplement only**, or **defer**? Is AWS upload + enabled run required before draft?
3. **Estimand language:** Please provide 3–5 **approved sentences** for manuscript methods/results that correctly describe Cell 11 CIF vs Cell 12 Cox (COMPASS will enforce across VECTOR draft).

B. Deferred items — Charles re-ask

CODA report §10 marked these deferred until Charles finalizes Army lane. COMPASS needs answers to sequence work:

4. **Pool harmonization:** Language-only glossary vs code-aligned LOO definitions across domains — any Army-specific terms VECTOR must use verbatim?
 5. **Pool-size >100 audit:** Manuscript disclaimer now vs audit before draft?
 6. **Priority:** 525/UIC consistency work vs pool-size audit vs manuscript support — rank for next 4 weeks.
 7. **TB-stratify default:** Routine runs on vs off; does Alex expect stratified panels in first advisor read of paper?
-

C. Army AWS / workflow

8. **AWS upload status** of 4-file TB-stratify set (2026-06-08 checklist) — done or pending? **Charles default:** manuscript drafting does **not** block on AWS parity unless he elevates.
 9. **Can CODA produce publication-ready figure exports** (vector PDF/PNG at journal spec) from local repo without AWS, for Charles to hand VECTOR?
-

D. Cross-domain

10. **Does CODA need any basketball or tenure pipeline changes** for manuscript, or only VECTOR prose harmonization?
 11. **Competing risks:** Should master plan push SCOUT toward time-to-event draft framing, or is Army-only CR sophistication correct for three-setting paper?
-

E. Stale / canonical docs

12. Confirm canonical Army narrative docs for VECTOR:

- `Publication_Plan.md`
- `Coda_Vector_Brief_Army_Evidence_For_Brian_Memo.md`
- `520_PIPELINE_COX_OVERVIEW.md`

Any superseded?

Please answer in prose; numbered replies welcome.
