

Charles — print and read list (June 2026 return)

Purpose: One ordered stack. Files use **numbered prefixes** (`01_` ... `14_`) so print order matches filename sort. Long original names live in `obsolete/original_filenames/` with provenance.

Advisor vs committee framing (binding): - **Alex Gates** → scientific **guidance** (method order, measurements, what the paper must show). - **Dakota Murray** → highly valuable **expert opinion** → treat as **decision points** to evaluate, not automatic path changes.

Symbol decoder (read before you drown in §): `01_forward_plan_reading_guide.md` → “**Symbol systems**” section. Short version: `#NN` = reading doc · `$N` (default) = **Word manuscript** section · staging `#12` §4 = Predictions → manuscript §7, not manuscript §4.

MUST READ FIRST — print all 6; read each in full, in order

Do not start Word inking until you finish these.

#	Print this file	What it tells you
1	<code>01_forward_plan_reading_guide.md</code>	Glossary + symbol decoder (<code>§</code> vs <code>#</code> vs notebook shorthands)
2	<code>02_Charles_decisions_locked.md</code>	Decisions you already made — refresh only
3	<code>03_Where_we_are_now.md</code>	Project status today (Phase A done; manuscript next)
4	<code>04_Project_story_plain_English.md</code>	Whole-project story in plain language
5	<code>../5-Manuscript/05_Model_Nesting_Note_v1.md</code>	One ontology: $L_{\text{net}} = B - D$; Alex score = D-leg
6	<code>06_Generative_closure_checklist.md</code>	SCOUT C1–C8 checklist (what “talent-only fails” means)

After #6: you know where you are, what is locked, and what “done” means for the generative leg.

REFERENCE — print #7–#14; keep handy while inking Word (lookup, not cover-to-cover)

#	Print this file	When to open it
7	07_Claim_language_guardrails.md	Before finalizing any claim in prose
8	08_Basketball_figures_on_disk.md	When inserting D10 PNGs (file list + paths)
9	09_Tenure_export_on_disk.md	When writing Setting 3 numbers (796 / 52 depts)
10	../5-Manuscript/10_Manuscript_ink_map.md	Section-by-section: what goes where in Word
11	../5-Manuscript/11_Dakota_feedback_decision_points.md	Before manuscript §4 (tenure) — evaluate each point; do not auto-rewrite
12	../5-Manuscript/12_Manuscript_staging_prose.md	Copy-from paragraphs while inking (do not read linearly)
13	13_INSIGHT_NUGGETS.md	Optional skim — pivotal framing only
14	14_PD12_reassessment_memo.md	Optional — B-lite origin, Rung 2.5, five-rung ladder (#01 has plain-English defs)

Quick filename map (all 14)

#	Path
1–4, 6–9, 13–14	3-Master_Plan/0N_*.md
5, 10–12	5-Manuscript/0N_*.md

Not on this list (on purpose)

Item	Why skip for now
<code>20_feedback_questions_and_observations.md</code>	Living Q&A while reading — optional; not cover-to-cover
<code>20260615_1045_COMPASS_to_Charles_forward_plan_and_questions.md</code>	Long; superseded for daily use by #1–#6 + obsolete archive
<code>obsolete/</code> folders	Archaeology only
Old PDFs in <code>obsolete/original_filenames/</code>	Stale — print from numbered <code>.md</code> sources above (or re-export PDF yourself)

After reading — next action

1. Open `5-Manuscript/Manuscript_working_outline_v1.docx`
 2. Ink manuscript §5 → §1 → §4 (generative → empirical triad → tenure) using `10_Manuscript_ink_map`, `12_Manuscript_staging_prose`, and D10 folder (`08_Basketball_figures_on_disk` for file names)
 3. Before manuscript §4 (tenure), open `11_Dakota_feedback_decision_points` and decide what to adopt — predictions live in manuscript §7 (ink from staging `#12` §4)
 4. Message COMPASS: “back in the game”
- Original filename map: see `obsolete/README.md` in each folder.
