

DISPOSABLE — Paper flipbook (PD30 bootstrap)

Purpose: Single entry point for **paper talk / chapter outline** work. Any new Agent thread: **read this file first**, then `transcripts/PD30_notes.md`.

Owner: Charles · COMPASS scaffolds · VECTOR rewrites prose later

Alex mandate (PD29 + PD30): Question → figure → **1–2 sentence claim** per slide; **gap slides** for open holes; **end-of-semester** paper target.

Say `anchor` in chat to paste the YOU ARE HERE block below.

YOU ARE HERE

Step	Task	Status
P0	Flipbook slide table (this doc § Slide deck)	● stub — fill claims
P1	Tie each primary slide to reigning figure path	● paths listed § Figure inventory
P2	Gap slides named (theory, causal ID, army CAC)	● stubs only
P3	Export to PowerPoint / PDF talk deck	■
—	Big Fish scout pipeline	▮ parked (PD30 back burner)
—	Tenure scrape / Big Fish poke	Background only

Time rule (PD30): Flipbook = **primary** intellectual work. Data = background unless a slide blocks on a missing PNG.

For agents — bootstrap instructions

- Read (in order):** this file → `transcripts/PD30_notes.md` → `01_The_Problem_in_Plain_English.md` (first 2 sections) → `BINDING_Selection_is_its_own_step.md` (three separations table).
- Do not** re-litigate Big Fish data stories unless Charles asks for a specific PNG path or claim.
- Do not** open the 14-doc print stack or `obsolete/` unless Charles asks — see `00_READ_ME_FIRST.md`.
- Output shape:** Edit § Slide deck below — one row per slide: `# | Question | Figure | Claim (1–2 sentences) | Gap?`
- Voice:** Outline claims for Charles to approve; not VECTOR manuscript prose yet.
- Binding:** Environment (`L_net = B – D`) ≠ advancement. Advancement = **score** (`S_i` , λ) then **select** (top K). Hero curve = **Layer A outcomes**, not the mechanism by itself.

One-sentence thesis (doc 01)

Organizations advance some people and not others. Strong peers can **help** and **hurt**. The dissertation asks whether that tension appears in data — and whether **congestion in the score** that ranks candidates can produce hero-shaped curves.

Basketball is the anchor test bed; **army** and **tenure** are cross-domain legs; **Big Fish** domains are backup portfolio only (PD30).

Alex lines to honor

Source	Quote / lock
PD29	“Organize the paper talk — big question, figure, one-to-two sentence conclusion.”
PD30	“The big one is what’s the story? ”
PD30	Primary trio: Army · MBB · Tenure — still on the table.
PD30	Big Fish = backup ; perf metric storyboard = screen fast , don’t sink weeks.
PD30	MBB “still worked” even if weaker — don’t discount.
PD30	Football usage LOO “very interesting” — optional congestion slide, not a fourth anchor leg.

Three settings (paper legs)

Setting	Domain	Y (advancement)	Peer X (environment)	Status for flipbook
1 · Anchor	NCAA MBB	NBA draft	Team LOO pool quality	✔ 3×3 + reigning HERO deck
2 · Cross	Tenure (OpenAlex)	Tenured vs out (decision year)	Dept LOO at decision	✔ PD29 3×3 + perf metric story
3 · Cross	Army (HRC talent)	Promotion / survival	Unit LOO pool quality	⚠ Cox / CIF in <code>talent/</code> — no 3×3 mosaic yet; CAC for access
Optional	Football usage	NFL draft	Teammate usage LOO	🌀 Congestion pedagogical slide only
Backup	Legends, NELs, ...	varies	varies	PD30: do not lead the talk

Figure inventory (primary)

Paths relative to repo root. Talk tracks: sibling `*_plot_highlights.md` where noted.

Label	Path	Use in talk
MBB 3×3	<code>3-Master_Plan/re_entry/HEROs_and_PASSes/sports_sandbox/data_story/MBB_DATA_STORY_reigning_3x3.png</code>	Full porch; panel 9 = reigning hero
MBB highlights	<code>.../sports_sandbox/data_story/</code> (see reigning manifest)	Talk track for each panel
Tenure 3×3	<code>.../tenure_sandbox/data_story/TENURE_DATA_STORY_pd29_3x3.png</code>	PD29 decision cohort porch
Tenure highlights	<code>.../tenure_sandbox/data_story/TENURE_DATA_STORY_plot_highlights.md</code>	Panel 9 $\beta_2 \approx -0.017$ concave
Tenure perf p1	<code>.../tenure_sandbox/data_story/TENURE_PERF_METRIC_STORY.png</code>	Career rate · cum pubs · annum pubs
Tenure perf p2	<code>.../tenure_sandbox/data_story/TENURE_PERF_METRIC_STORY_p2.png</code>	10-bin sensitivity
Model one-slide	<code>3-Master_Plan/re_entry/Model.pptx</code>	Assign → score → select; λ knockout
Army Cox / CIF	<code>talent/</code> notebook Cell 12 + partial effects	Setting 3 evidence — pick canonical PNG
Football usage twin	<code>.../football_sandbox/perf_story/FOOTBALL_usage_Tj_q16_ew16.png</code>	** T_j flat vs LOO steep** — why LOO
Football usage LOO	<code>.../football_sandbox/perf_story/panels/HERO_football_perf_q16_loo_z_diy_usage_overall_slide.png</code>	Row 5 perf story
Binding doc	<code>3-Master_Plan/BINDING_Selection_is_its_own_step.md</code>	Score $\neq$ select slide

Big Fish 3×3 decks (backup only): `football_sandbox`, `legends_sandbox` — see `HEROs_and_PASSes/_DISPOSABLE_big_fish_datasets_assessment.md`.

Slide deck (stub — fill claims)

Format: `# · Question · Figure · Claim · Notes`

Act 0 — Frame (2–4 slides)

#	Question	Figure	Claim (draft)	Gap?
0.1	What is the puzzle?	<i>(none — text)</i>	Advancement is scarce; peer context can help or hurt; we test whether peer pond quality predicts outcomes on its own axis.	
0.2	What is <i>not</i> the claim?	<code>BINDING_Selection_is_its_own_step.md</code>	Hero = outcome vs environment ; not proof of developmental peer effects; separate from score then select .	
0.3	What is the hero?	MBB panel 9 crop or single HERO bar chart	Draft rate vs teammate LOO quality: rise, plateau, top-bin dip (inverted-U tail).	Exact bin rates from reigning lock

Act I — Phenomenon (MBB anchor)

#	Question	Figure	Claim (draft)	Gap?
1.1	Who is in the pond?	MBB 3×3 panel 1	~23k last-PS rows; ~615 drafted; filters locked (mg10, min20, ALLT).	
1.2	Talent alone?	MBB ECDF / own-Â panel	Own performance predicts draft monotonically — talent baseline is sane.	Pull specific panel # from manifest
1.3	Different axis, different shape?	MBB 3×3 panel 9	Pool LOO has non-monotone shape — phenomenon is on environment axis.	
1.4	Assortment / overlap?	MBB overlap panel	Teams are not isolated talent bins — motivates LOO.	

Act II — Cross-domain (tenure + army)

#	Question	Figure	Claim (draft)	Gap?
2.1	Same skeleton, academia?	Tenure 3×3 panel 9	Decision-year dept LOO porch — concave / middle rise (sparse N).	Cox / formal test slide?
2.2	Which performance metric?	Tenure perf story p1–p2	Career rate (Alex lock) vs cum pubs vs annum pubs — metric choice matters.	
2.3	Army promotion?	Army Cell 12 HR / combined effect	Third setting — pool quality + quadratic in survival model.	GAP: canonical hero PNG for army
2.4	Hit rate across domains?	(composite or 3-panel)	MBB + tenure + army: congestion-shaped porches appear in selection settings.	How strong is tenure vs MBB?

Act III — Mechanism sketch (minimal model)

#	Question	Figure	Claim (draft)	Gap?
3.1	Minimal generative story?	Model.pptx	Assign → score (S_i) → select (top K); λ = congestion in score.	
3.2	λ knockout?	Sim side-by-side (Pass B)	Talent-only vs score-with-λ reproduces hero tail?	GAP: which sim PNG is canonical?
3.3	Environment ≠ score?	Text + binding table	L_net = B – D describes peers; advancement is separate pipeline step.	

Act IV — Pedagogy / LOO lesson (optional, 1–2 slides)

#	Question	Figure	Claim (draft)	Gap?
4.1	Why LOO not team mean?	FOOTBALL_usage_Tj_q16_ew16.png + usage LOO row	Team mean usage flat ; teammate usage LOO steep — congestion is peer-relative , not team style.	Football = illustrative backup, not 4th leg
4.2	Wrong metric, wrong story?	Football perf row 4 vs 5	PPA LOO ↑ draft; usage LOO ↓ — talent peer vs touch congestion .	

Act V — Limits & gaps (honest close)

#	Question	Figure	Claim (draft)	Gap?
5.1	Causal?	(gap slide)	Descriptive porches + minimal sim — not reduced-form causal peer effects.	
5.2	What’s open?	(gap slide)	θ/K/N calibration; F-HERO; tenure scrape completeness; army CAC access.	
5.3	So what?	(gap slide)	One sentence contribution for Wang-style “phenomenon + minimal mechanism + cross-domain”.	Charles + VECTOR

Gap slide register

Gap ID	Topic	Owner	Blocker
G1	Army canonical hero / CIF PNG for talk	Charles / CODA	Pick from <code>talent/</code> Cell 12 outputs
G2	Canonical Pass B λ knockout figure	Charles / SCOUT	<code>sports/540</code> sim deck
G3	Tenure formal Cox slide (parallel army)	PEER	Post-scrape
G4	Contribution paragraph (Wang move)	VECTOR	After slide claims locked
G5	CAC (Common Access Card) / army data access	Charles	Admin

Canon pointers (do not duplicate — link)

Doc	Path
Re-entry index	<code>00_READ_ME_FIRST.md</code>
Problem plain English	<code>01_The_Problem_in_Plain_English.md</code>
Three kinds of model	<code>02_Three_Kinds_of_Model.md</code>
Pass A / Pass B	<code>04_Pass_A_and_Pass_B_in_Plain_English.md</code>
PD29 notes	<code>../../transcripts/PD29_notes.md</code>
PD30 notes	<code>../../transcripts/PD30_notes.md</code>
Charles checklist	<code>CHARLES_CHECKLIST.md</code>
Hero reset plan	<code>../plans/20260721_hero_model_reset.plan.md</code>
Tenure campaign	<code>HEROs_and_PASSes/tenure_sandbox/TENURE_HERO_Campaign_Plan.md</code>
Big Fish assessment	<code>HEROs_and_PASSes/_DISPOSABLE_big_fish_datasets_assessment.md</code>

Parked (PD30 — not flipbook blockers)

- **HERO domain scout** (`scripts/hero_domain_scout.py`) — intake YAML → β₂ screen → perf story on hits
- **Big Fish** deep dives (legends weak; football composite fail)
- **Education** porches (NELS, HSB) until story needs a fourth domain

Thread log

Date	Entry
2026-09-04	Bootstrap created post-PD30; slide table stub; figure inventory wired; agent bootstrap instructions.
