

DISPOSABLE — Tenure hero thread (2026-09-01)

Purpose: YOU ARE HERE for Charles + COMPASS tenure HERO work on Mac.

Campaign plan: `TENURE_HERO_Campaign_Plan.md`

PD29: `../../../../transcripts/PD29_notes.md`

Say `anchor` in chat to paste the table below.

YOU ARE HERE

Step	Task	Status
0	PEER handoff + Mac rsync verified	✓
1	Campaign plan + folder scaffold	✓
2	Run <code>tenure_pass_a_hero.py</code> → HERO + BDP porch	✓ (2026-09-01–02)
3	Alex porch review (Sep 2)	✓ — assortment high; censored understood; metric forks flagged
4	PD29 delta → career master + rebuild plan	panel ✓ cohort ✓ BDP ✓ HERO ✓ (389 dept LOO · 280 own career)
4b	Reigning tenure HERO lock	Q16 · cum mean pubs/year · dept pond LOO @ decision year (Sep 2 night) — other BDP may still be v0 metric until regen
4c	3x3 data story (Alex screening)	Full grid ✓ incl. Act II probes 7–8 · <code>TENURE_DATA_STORY_plot_highlights.md</code>
5	Paper talk outline (50/50 w/ data; ~1 week)	Parallel (PD29 P1–P4)
6	Act III p diagnostic	Pending (after PD29 spine?)
7	PEER scrape bolster	Parked

Alex one-liner (Sep 2): Porch direction **good**; next tenure build = **decision-year cohort + cum pubs/career length + dept pond at decision year** — not more bin variants on v0 alone.

PD29 delta vs v0 (short)

Full table: `TENURE_hero_pipeline.md` § PD29 delta.

v0 now	PD29 target
ASST-PS mean peer LOO; LAST-PS cum on some HERO	Decision year ~5–6 rows only (up-or-out)
ASST-PS mean pubs/year (exploratory)	ALL-PS · mean · own pubs at decision year (<code>pubs_per_career_year</code>)
Unixyear assistant pools	Whole dept in decision year
<code>faculty_panel_with_pools.jsonl</code>	Master authorxyear pubs → running cum

Sep 2 porch: overlap H_sort ✓; promoted-with-zero annual pubs = wrong lens → supports cumulative lock.

Print stack

Focus — 3 docs, PD29 right now (`print_tenure focus` or bare `print_tenure`)

#	Document	Path
1	YOU ARE HERE	<code>../tenure_sandbox/_DISPOSABLE_tenure_hero_thread.md</code>
2	PD29 Alex locks	<code>transcripts/PD29_notes.md</code>
3	Pipeline + grain naming + PD29 delta	<code>../tenure_sandbox/TENURE_hero_pipeline.md</code>

Core — full campaign binder (`print_tenure core` , 7 docs)

Adds campaign plan, career-master handoff, Mac handoff, perf-metrics fork — see campaign plan § Print stack.

CLI (Mac, after `sports`): `print_tenure` · `print_tenure focus` · `print_tenure core` · `print_tenure full`

Slides (not markdown PDF): `hero/TENURE_HERO_slides_AUTO.pptx` , `basic_data_plots/TENURE_BDP_slides_AUTO.pptx`

v0 lock (still valid for exploratory deck)

- File: `faculty_panel_with_pools.jsonl`

- Filter: HIGH/MEDIUM + LOO
- Grain: ASST-PS mean peer LOO / LAST-PS variants on slides (`--window` / `--stat`)
- Y: tenure rate among **resolved**; censored parked from **rates** but in **quantile rank**
- Out: `tenure_sandbox/hero/`, `tenure_sandbox/basic_data_plots/`

Related (PD29, not tenure)

Item	Path
LoL panel	<code>datasets/legends/lol_big_fish_player_split_panel.csv.zip</code>
Naming	<code>legends</code> → future <code>legends_sandbox/</code> , <code>legends/scripts/</code>
Notes	<code>PD29_notes.md</code>

Thread log

Date	Entry
2026-09-01	Thread opened; scaffold + campaign plan; awaiting first plot.
2026-09-01	Censored-in-quantile pros/cons → <code>TENURE_hero_pipeline.md</code> § for Alex; campaign plan item #6.
2026-09-02	Alex porch (PD29 same call); BDP/HERO deck labels fixed; <code>PD29_notes.md</code> + pipeline § PD29 delta; <code>datasets/legends/</code> convention.
2026-09-02	<code>build_author_year_career_master.py</code> → <code>author_year_career_master.jsonl</code> (3,630 authors, 99,733 rows, Mac ~2s).
2026-09-02	Grain naming lock in code + <code>TENURE_hero_pipeline.md</code> § Grain naming; retire spell-mean; Alex Å = ALL-PS mean at decision year.
2026-09-02	<code>print_tenure focus</code> (3 docs default) + <code>core</code> / <code>full</code> tiers in <code>~/.project_envs.zsh</code> .
2026-09-02	<code>decision_year_cohort.jsonl</code> (60 rows yas 5–6); PD29 BDP plots + deck section (4 slides).
2026-09-02	<code>panel_builder.py</code> rewrite: dept-year censoring, <code>asst_time</code> , <code>transferred</code> (17); rebuild Stages 7–8.
2026-09-02	OTT lock: non-tenured title in Y+1 → <code>off_tenure_track</code> attrition; panel rebuilt.
2026-09-02	<code>decision_year_cohort.jsonl</code> rebuilt — all resolved infHM, <code>asst_time</code> , no 5–6 filter.
2026-09-02	BDP replot (v0 + decision cohort) on rebuilt panel; slides updated.
2026-09-02	Decision HERO: <code>tenure_pass_a_decision_hero.py</code> → dept LOO N=389, own career N=280; deck +2 slides.
2026-09-02	Decision HERO Q8/Q10 robustness (dept LOO + own career); deck now 15 slides.
2026-09-03	Reigning tenure HERO = Q16 cum pubs/career year · dept LOO (not necessarily all BDP on same metric). MBB 3×3 data story built (<code>MBB_DATA_STORY_reigning_3x3.png</code>); tenure grid next.
2026-09-03	Tenure PD29 3×3: dept LOO hist ECDF; Ai+Tj, tenure-mass ECDF, overlap, pool size; mosaic + plot highlights.
2026-09-03	Act II probes: <code>tenure_pass_a_congestion.py</code> → panels 7–8 in mosaic (CCT z[1,2] CCT=NO; elite top20% no tail dip).
