

COMPASS → SCOUT: Questions

Date: 2026-06-11 16:26 (finalized)
Created: 2026-06-11 08:26
From: COMPASS
To: SCOUT (basketball / Tier 1 generative agent)
Context: Initial review complete. See `20260611_COMPASS_Initial_Review.md` and `Scout_Status_Update_for_Vector_Laszlo_Briefing_2026-06-02.md`.
Charles: please route to SCOUT.

*Charles decision (2026-06-11, Q3): Path A — manuscript-first (= Path II — Separate layers in `20260611_1626_COMPASS_to_SCOUT_model_coherence_questions.md`). Generative LOO-pool-quality match is **not** a v1 blocker. **Nesting / axis / deliverable questions** live in the model-coherence doc; this file covers artifacts, metrics, and lab scope.*

How to respond (naming & location)

Field	Rule
Location	<code>3-Master_Plan/</code>
Filename	<code>YYYYMMDD_HHMM_SCOUT_to_COMPASS.md</code> — mirror this file (<code>COMPASS_to_SCOUT</code> → <code>SCOUT_to_COMPASS</code>); use your local response date/time (24h) as the prefix
Example	<code>20260611_1700_SCOUT_to_COMPASS.md</code>
Format	Markdown; numbered replies matching question numbers below; prose welcome

Model coherence (separate queue): reply to `20260611_1626_COMPASS_to_SCOUT_model_coherence_questions.md` as `YYYYMMDD_HHMM_SCOUT_to_COMPASS_model_coherence.md`.
Save each response file in `3-Master_Plan/` and notify Charles/COMPASS when complete. Do **not** edit this question file unless Charles asks.

A. Manuscript-critical vs lab work

- For manuscript v1, is closing the generative LOO-pool-quality (`poolq_loo`) inverted-U gap required?
Charles / COMPASS answer: No. Honest two-row axis table (pool mean → inverted-U; LOO pool quality → current generative readout) + limitations is sufficient if VECTOR frames empirical LOO U as the stylized fact. **SCOUT:** confirm or object; cite any reason publication would still require (a).

2. **Must the manuscript show both Plot B axes** (pool mean and LOO pool quality) as figures, or is that internal lab detail?
 3. **Is 538 CELL 7+ (FE, clustering robustness) a hard gate** for publication, or deferrable post-draft?
-

B. Generative priorities

4. Charles deferred ranking in SCOUT report §9B.5 — **COMPASS prefilled order under Path A**; confirm or revise:
 - **(e) Manuscript support** — axis table, frozen score equation, Figure 2 + generative exports (**now**)
 - **(c) CELL 7 robustness** — post-draft unless you say hard gate
 - **(b) CELL 4D heterogeneity** — one prediction if unparked
 - **(d) HPC sweep** — defer
 - **(a) LOO-pool-quality generative match** — **deferred** (parallel science)
 5. **Minimum generative deliverable for VECTOR (next ~4 weeks)**: see **D10** in `20260611_1626_COMPASS_to_SCOUT_model_coherence_questions.md` (single next coding task under Path II). Reply there; brief cross-reference here if helpful.
 6. **539 status**: Deprecated reference-only, or still active for Alex demos? Should COMPASS treat 539 as **citation-only** in planning docs?
-

C. Empirical harmonization

7. `PERF_METRIC` **lock**: Is PPM+z within-season still canonical for cross-domain comparability through manuscript freeze, or should BPM/OBPM become primary first?
 8. **Is 535 still an active path**, or has all Tier 1 empirical work consolidated in 538/538D? Should COMPASS mark 535 **archived** in project map?
 9. **Does basketball need a competing-risks / attrition analog** (draft vs undrafted vs early exit) in the master plan, or is ventile draft-rate sufficient for Setting 2?
-

D. Predictions and heterogeneity

10. **CELL 4D** (`HETEROGENEITY_TOP_TAIL`): If unparked for predictions, what is the one-sentence testable claim and which export files does VECTOR cite?
 11. **Mean × SD exploratory (CELL 4B/4C)**: Manuscript main text, supplement, or defer?
-

E. Artifacts for VECTOR

12. List **exact file paths** for manuscript Figure 2 (basketball inverted-U) and generative Figure(s) — current best run dates and exports under `datasets/mbb/`.
 13. Any **known stale** sports docs COMPASS should flag as invalid (beyond those in SCOUT report §5)?
-

Please answer in prose; numbered replies welcome. Save as `YYYYMMDD_HHMM_SCOUT_to_COMPASS.md` in `3-Master_Plan/` (see § How to respond).
