

Read me first — re-entry (July 2026)

Last synced: 2026-07-28 — score ≠ select wording; docs 01–03 + slide + sim OPORD; **p** via `540_*`.

If you feel lost: you are in the right place. **Stop opening other project folders** until you finish the three documents below in order. This folder exists because the rest of the repo grew into a **reference library** for agents and for “already immersed” you. That library is still valuable. It is **not** the right entry point while you are re-orienting under time pressure.

Your only reading list (for now)

Read these **in order**. Each is written to stand alone — you should not need to open other files every two sentences.

#1 confusion (Charles lock): Environment `L_net = B - D` ≠ advancement. Advancement = **score** (`S_i`, λ) then **select** (top K now). Locked in doc 02 and `../BINDING_Selection_is_its_own_step.md`.

Order	Document	Time	What you get
1	01_The_Problem_in_Plain_English.md	~15 min	What the dissertation is asking; what the basketball “hero” curve is
2	02_Three_Kinds_of_Model.md	~25 min	Why “the model” confused you; three separate jobs (describe / explain / simulate)
3	03_Three_Day_Basketball_Focus.md	~10 min	What “done” means in the next 72 hours; what is explicitly out of scope

PDF: from repo root:

```
./scripts/convert_single_md_to_pdf.sh 3-Master_Plan/re_entry/01_The_Problem_in_Plain_English.md
./scripts/convert_single_md_to_pdf.sh 3-Master_Plan/re_entry/02_Three_Kinds_of_Model.md
./scripts/convert_single_md_to_pdf.sh 3-Master_Plan/re_entry/03_Three_Day_Basketball_Focus.md
```

What we are not doing right now

- We are **not** deleting or throwing away prior work.
 - We are **not** asking you to read agent mail, COMPASS memos, Pertinent Thoughts, or the old 14-document print stack.
 - We are **not** requiring you to reconcile every notation variant across Army / basketball / tenure in one sitting.
- See [PARKED_FOR_LATER.md](#) for a honest list of “good docs, wrong moment.”

After the three documents

Your manual checkoff (beginning → end): `CHARLES_CHECKLIST.md` — mark what **you** ran, wrote, or said. Ignore “Done” tables in OPORD / doc 03 / COMPASS for personal progress; those are project/agent status.

When the three layers make sense again, you can optionally open:

- `Model.pdf` / `Model.pptx` — **your one-slide story** (assign → score → select, unified `S_i`, Alex v1 `(B-D)=-L_C`, empirical Naïve/Hero, knockout $\lambda=0$)
- `3-Master_Plan/plans/20260721_hero_model_reset.plan.md` — longer working plan (same story, more detail)
- `sports/datasets/mbb/exports_inverted_u_v0/alex_side_by_side_v0/` — hero + side-by-side PNG, knockout CSVs, limitation caption (paths in doc 03)

Alex v1 minimal model (Jul 2026): empirical hero + talent baseline; generative **assign → score** (`S_i`) → **select (top K)** with $\lambda=0$ vs `S_i = A_i - \lambda \cdot L_C` knockout; side-by-side figure + limitation sentence. **p** (assignment assortativity) ablation is optional follow-up — see `../../sports/540_READ_ME_SIM.md` and `model_OPORD.md`.

Sim re-entry: agents doing generative code start at `sports/540_READ_ME_SIM.md`, not archived `538D` notebooks.

Do not open `sports/documents/Hero_Model_Three_Layers_Memo.md` until doc 02 feels easy — it is a short reference card, not a re-entry guide.

For agents

When Charles says he is **re-entering** or **lost**, default to docs in `3-Master_Plan/re_entry/` only. Write new explanatory prose here (narrative, inline definitions). Do not add cross-links to `obsolete/`, agent reports, or shorthand memos unless Charles asks.
