

Paper Directions 28 — my read (Aug 28, 2026)

Source: `transcripts/20260828_Paper_Directions_28_otter_ai_transcript.docx` (~3:21)
Context: Short check-in after porch work — Charles showed **no-winsor poolq_LOO** distribution and confirmed $\hat{A}$ talent distribution on reigning deck.
Prior: `PD27_notes.md` · `../3-Master_Plan/re_entry/HEROs_and_PASSes/sports_sandbox/reigning_hero/README.md`

Headline

Alex approved the cleaned distributions (“this cleaned up a good bit of stuff for me”). **Next deliverable:** rerun the **PD20–21 calibration chain** on the **reigning hero population** (09–21 · min20 · mg10) and report ρ^* (homophily), γ^* , λ^* , and **temperature** sweep status.

Alex one-liner: “Give me those numbers.”

Transcript arc (~3:21)

- 1. No-winsor LOO (00:00–00:12)** — Charles shows poolq_LOO dist without winsor clip; Alex: “Great. That looks good.”
- 2. $\hat{A}$ distribution (00:22–01:16)** — Charles pulls $\hat{A}_i$ histogram from slide deck; “very slightly skewed.” Alex happy — winsor confusion resolved.
- 3. Calibration ask (01:34–02:01)** — Alex: next step = **homophily calculation on the new data**, then **gamma star, lambda star**, and **temperature**. Charles: “Right up.”

Alex ask — locked task list

#	Parameter	PD21 script	Reigning output
1	ρ^* (homophily / H_sort match)	<code>pd21_rho_hsort_calibrate.py</code>	<code>reigning_hero/calibration/rho/</code>
2	γ^*, λ^*, t^*	<code>pd21_draft_bernoulli_mle.py</code>	<code>reigning_hero/calibration/mle/</code>
3	Temperature (Gibbs SELECT)	<code>grandchild_temperature_select_sweep.py</code>	<code>reigning_hero/calibration/temperature/</code>

Population lock (same as reigning hero):

Field	Value
Seasons	2009–2021
Panel for ρ / MLE	all-ps (player-season rosters; same as PD21 campaign)
Filters	min20 · mg10 (default pipeline) · winsor 0.01–0.99 on poolq
HERO aperture	last-ps (separate — already built in porch)

Not on screen: F-HERO, draft-rate LOO vs T_j , star sweeps — those are porch/Sl; this call is **calibration numbers only**.

Campaign comparison (baseline)

Run	Seasons	ρ^* (longitudinal)	γ^*	λ^*	t^*
PD21 campaign	2011–2021	0.0	—	—	—
PD21 MLE (primary)	2013–2021	—	18.0	2.57	1.07
Reigning (PD28)	2009–2021	0.0	19.57	1.30	1.07

See `../3-Master_Plan/re_entry/HEROs_and_PASSes/sports_sandbox/reigning_hero/calibration/CAMPAIGN_COMPARE.md` after runs complete.

Build

```
# repo root – all three steps
python sports/scripts/reigning_hero_calibration.py

# or subset
python sports/scripts/reigning_hero_calibration.py --only rho mle temperature
```

Thread log

Date	Entry
2026-08-28	PD28 ingested; calibration scaffold + driver wired; runs started on 09–21 reigning panel.
