

Ivy_Net — Central documents (docs/)

Use this folder for guides that apply to **more than one** project area (**talent / sports / tenure**) or for “how the repo works” (Git, sync, tooling) when there is no natural home in a single domain.

Where to look first

- 1. **Domain folder** — topic-specific notes and runbooks:
 - `sports/documents/`
 - `tenure/documents/`
 - `talent/documents/`
- 2. `docs/` **here** — if the topic is **shared**, or you **cannot** find it under the domain that matches your current work.

What lives here now

File	Purpose
<code>GIT_MULTIPLE_MACHINES_ELEMENTARY.md</code>	Git/GitHub mental model: laptop, HPC, GitHub; first push/clone/pull.
<code>GIT_FOR_DUMMIES.md</code>	Practical Git recipes: stash, rebase, fix staging, recovery.

Adding new central docs

- Put the file in `docs/` and add one line to the table above.
- From a domain doc, link with a **relative** path, e.g. from `sports/documents/foo.md` : `../../docs/README.md` .
- Prefer **moving** a misplaced file into `docs/` over **duplicating** it; update links in the same commit.

Related (not in docs/)

- Data sync policy: `scripts/DATA_SYNC.md`
- Root `.gitignore` — what not to commit
