

SCOUT — Round 3 questions for Charles

Date: 2026-08-19
Context: Read full `SCOUT_and_COMPASS_Q_and_A.md` after Round 1 (SCOUT) + Round 2 (COMPASS).
Round 3 finding: No blocking disagreements between SCOUT and COMPASS. Three **decisions** need your call before Round 4 work starts.

1. Near-term priority stack (pick ordering)

COMPASS and SCOUT agree on **what** is unblocked vs blocked; **you** choose **order**:

Track	Unblocked?	Effort (rough)	Delivers
A	Yes	Low	Alex HAND / PD20–22 on locked 2011–2021 POST-QC (mg=10, min=20)
B	Yes	Medium (hours–overnight)	<code>p/H_sort to 2025</code> via <code>scripts/regenerate_pd21_rho_hsort_13_25.sh</code>
C	Yes	~1 day	OBPM/BPM sensitivity (39-spec Pass A grid or <code>--quick</code> slice; <code>pass_a_hero_sensitivity_plots.py</code>)
D	Partial	~0.5 day if hoopR works	Draft register 2022–2025 append + matcher refresh (blocks forward Y_draft hero only)

Question for Charles: Which two tracks run **before Alex**, and which are **explicitly parked** until after?
COMPASS default recommendation (Round 2): **A first**, then **B** if time; **C** appendix-only unless you want perf-metric robustness in the brief; **D** parallel / post-Alex unless you need 2022+ draft ventiles now.

2. HAND deck — add B6 CPR table?

COMPASS (B6) flagged optional: small table (bins 13–16 CPR %, culminating in **66.8% bin 16**) next to July replay PNG.
Question for Charles: Include in Alex HAND deck, appendix only, or skip?
Artifact paths if yes: - July replay: `pass_a/sensitivity/PASS_A_sensitivity_loo_mg0_2011_2021_b16q_w0199_july_replay_mg0.png` - Canonical POST-QC hero: `pass_a/PASS_A_empirical_talent_vs_roster_side_by_side.png` (or `_2013_2021`)

3. Backward ESPN scrape (2005–2010)?

SCOUT: data **in-file** and matchable; COMPASS: **park** unless dissertation needs long-panel credibility.
Question for Charles: Green-light **2005–2010 back-scrape** now, or **explicitly defer** (document as “not pursued” in Q&A)?

SCOUT follow-up for Round 4 (not a Charles decision)

Before executing **A5 / draft append**, SCOUT will verify:

- hoopR / sportsdataverse-py NBA draft loader** — exists, schema vs `nbaplayersdraft.csv`, 2022–2025 row counts.
- 2022–2025 box QC** — team-season games-per-TS histogram under mg=10 when panel window extends (parallel to PD22 slide 6/7).

No COMPASS ↔ SCOUT cross-questions beyond these verification tasks.

Round 3 verdict

Item	Action
Cross-agent conflict	None — COMPASS accepts SCOUT verified counts
New sub-question in main Q&A	B5a added (POST-QC bin 12–16 draft rates — SCOUT verified)
Separate COMPASS→SCOUT question doc	Not needed
This doc	Charles decisions only — reply inline or in chat
