

COMPASS — Round 3 questions for Charles

Date: 2026-08-19
Context: Full read of `SCOUT_and_COMPASS_Q_and_A.md` after Round 1 (SCOUT) + Round 2 (COMPASS) + SCOUT Round 3 (`20260819_1715_SCOUT_Round3_questions_for_Charles.md`).
Round 3 finding: No disagreement with SCOUT. SCOUT's Charles doc covers priority stack, B6 table, and backward scrape. This doc adds two COMPASS-only decisions SCOUT did not frame.

Endorse SCOUT Round 3 (no cross-agent conflict)

SCOUT item	COMPASS
Verified counts B1–B6, A1–A5	Accept — no re-verification
Priority tracks A–D	Agree with SCOUT/COMPASS default: A first , B if time before Alex, C appendix unless you want perf robustness in brief, D parallel/post-Alex
B6 CPR table optional	Agree — helpful but not required; B5a + July replay contrast is higher value (see §2 below)
Backward 2005–2010 scrape	Agree — defer unless long-panel credibility is a dissertation requirement
Round 4 SCOUT pre-flight (hoopR draft loader, 2022–2025 mg=10 QC)	Agree — run before executing Track D

Separate COMPASS→SCOUT question doc: Not needed. SCOUT's Round 4 pre-flight list is sufficient.

1. Main line after Alex — PD14 vs SELECT/MLE (COMPASS-only)

SCOUT's Track A is **Alex HAND on locked 2011–2021 POST-QC**. Both agents agree Rung 1 is closed and **PD14 predictive gain** is the best **MBB Rung 3** while Army is locked out. SCOUT's stack does not order **PD14 vs SELECT/MLE (λ , t , γ)**.
Question for Charles: After Alex brief, which runs **first**?

Option	Delivers	Tradeoff
PD14 first	Empirical Rung 3 — Model A (ability) vs B (+ roster congestion) on same POST-QC panel	Answers “does congestion add predictive lift?” before generative fit is tight
SELECT/MLE first	Generative fit checkpoint — λ , t , side-by-side hero + sim with honest limits	Delivers Alex mechanism story; PD14 waits on fitted sim contrast

COMPASS recommendation: **PD14 first** if Alex meeting is **phenomenon + mechanism prose** and sim fit can follow; **SELECT/MLE first** if Alex meeting needs **fitted generative parameters** on the same slide as hero. Both are unblocked on 2011–2021 POST-QC — this is **ordering**, not a blocker.

2. Alex defensive slide — July artifact vs POST-QC (COMPASS-only)

SCOUT offered B6 CPR table as optional. COMPASS ranks a **single contrast slide** higher:

- Left / canonical:** `pass_a/PASS_A_empirical_talent_vs_roster_side_by_side.png` (POST-QC: middle rise, flat elite tail)
- Right / sensitivity:** `pass_a/sensitivity/PASS_A_sensitivity_loo_mg0_2011_2021_b16q_w0199_july_replay_mg0.png` (July replay: elite dip)
- Caption bullets:** B5a (POST-QC bins 12–16 rates) + B6 bin-16 **65.8% CPR** under mg=0 tagging

Question for Charles: Include this **July vs POST-QC contrast** in Alex HAND (main deck), appendix only, or skip?
COMPASS recommendation: **Main deck or one backup slide** — it preempts “you lost the inverted-U” without reopening mg=10 policy.

3. SCOUT Round 3 doc — reply in one place

SCOUT's three questions (priority A–D, B6 table, backward scrape) stand. **Reply once** in chat or inline here for **both** docs:

- SCOUT `20260819_1715_SCOUT_Round3_questions_for_Charles.md` — items 1–3
- This doc — items 1–2 above

Round 3 verdict (COMPASS)

Item	Action
Cross-agent conflict	None
Main Q&A edit	B5a COMPASS line filled only (SCOUT table preserved)
COMPASS→SCOUT question doc	Not created
Charles decisions pending	5 total (3 SCOUT + 2 COMPASS) — Round 4 starts after your call
