

COMPASS → CODA: Questions

Date: 2026-06-11 16:26 (finalized)
Created: 2026-06-11 08:26
From: COMPASS
To: CODA (Army / talent agent)
Context: Initial review complete. See `20260611_COMPASS_Initial_Review.md` and `CODA_report_to_COMPASS.md`. Alex-facing items → `20260611_Alex_Gates_Talking_Points.md`.
Charles: please route to CODA.

How to respond (naming & location)

Field	Rule
Location	<code>3-Master_Plan/</code>
Filename	<code>YYYYMMDD_HHMM_CODA_to_COMPASS.md</code> — mirror this file (<code>COMPASS_to_CODA</code> → <code>CODA_to_COMPASS</code>); use your local response date/time (24h) as the prefix
Example	<code>20260611_1700_CODA_to_COMPASS.md</code>
Format	Markdown; numbered replies matching question numbers below; prose welcome

Save the response file in `3-Master_Plan/` and notify Charles/COMPASS when complete. Do **not** edit this question file unless Charles asks.

Charles decisions (2026-06-11): Summer–Fall 2026 manuscript target · Army **525/TB-stratify/pool audit deferred** unless Charles or Alex elevates · Army runs on **AWS** (Cursor = digital twin). See `PROJECT_STATUS_AND_NEAR_TERM_PLAN.md`.

A. Manuscript deliverables

1. Which Army figures are manuscript v1 canonical? List notebook cell, run profile (e.g. 19_1), and output filenames for:
- Primary inverted-U CIF bar panel
 - Cox partial effects / HR table
 - Any secondary figure VECTOR should include

Charles (paused): Do not answer yet. Army code is run on **remote AWS**; Charles edits in Cursor then hand-types on AWS. CODA in Cursor may not see latest plots or run profiles. Charles will identify canonical figures after AWS sync. **Not**

blocking other CODA answers.

2. **TB-stratified CR add-on:** For manuscript v1, should own-TB tertile panels be **included**, **supplement only**, or **defer**? Is AWS upload + enabled run required before draft?

Charles (→ Alex): Deferred to Alex conversation — see `20260611_Alex_Gates_Talking_Points.md` § TB-stratified panels. **CODA:** Optional — briefly describe what is implemented (`cr_tb_stratify.py`, default off, Cell 11 hook) if useful for Charles's Alex prep.

3. **Estimand language:** Please provide 3–5 **approved sentences** for manuscript methods/results that correctly describe Cell 11 CIF vs Cell 12 Cox (COMPASS will enforce across VECTOR draft).

Charles: CODA **draft** sentences for **Charles + Alex review** (not final until Alex signs off). Same topic in Alex talking-points doc § Estimand language.

B. Deferred items — Charles re-ask

CODA report §10 marked these deferred until Charles finalizes Army lane.

4. **Pool harmonization:** Language-only glossary vs code-aligned LOO definitions across domains — any Army-specific terms VECTOR must use verbatim?

Charles: Open — CODA please answer.

5. **Pool-size >100 audit:** Manuscript disclaimer now vs audit before draft?

Charles (locked): Keep moving on draft (Alex direction). Charles suspects pools **>50** may be **coding glitches** (cutoff dates superimposing distinct rating-pool events). **Re-audit before publication** — not a pre-draft blocker. Light disclaimer in draft OK if VECTOR wants; full audit is Charles pre-submission task. See `Pertinent_Thoughts.md` pool-size notes.

6. **Priority:** 525/UIC consistency work vs pool-size audit vs manuscript support — rank for next 4 weeks.

Charles (locked): 525/UIC tabled for now — revisit before publication **only if** manuscript needs more Army mechanism meat. Pool-size audit = pre-publication (item 5). Near-term CODA priority = **manuscript support** (estimand draft, doc canon, cross-domain harmonization) unless Charles elevates.

7. **TB-stratify default:** Routine runs on vs off; does Alex expect stratified panels in first advisor read of paper?

Charles (→ Alex): Same as item 2 — **Alex talking-points doc**. CODA may note current default (`CR_TB_STRATIFY_CONFIG["enabled"] = False`) if helpful.

C. Army AWS / workflow

8. **AWS upload status** of 4-file TB-stratify set (2026-06-08 checklist) — done or pending? **Charles default:** manuscript drafting does **not** block on AWS parity unless he elevates.

Charles: CODA please answer status if known from repo/docs; Charles will confirm from AWS side.

9. Can CODA produce publication-ready figure exports (vector PDF/PNG at journal spec) from local repo without AWS, for Charles to hand VECTOR?

Charles: Paused while item 1 (canonical figures) is paused. Answer after AWS sync or note limitations of local vs AWS runs.

D. Cross-domain

10. Does CODA need any basketball or tenure pipeline changes for manuscript, or only VECTOR prose harmonization?

Charles: Open — CODA please answer.

11. **Competing risks:** Should master plan push SCOUT toward time-to-event draft framing, or is Army-only CR sophistication correct for three-setting paper?

Charles: Open — CODA please answer.

E. Stale / canonical docs

12. Confirm canonical Army narrative docs for VECTOR:

- `Publication_Plan.md`
- `Coda_Vector_Brief_Army_Evidence_For_Brian_Memo.md`
- `520_PIPELINE_COX_OVERVIEW.md`

Any superseded?

Charles: Open — CODA please answer.

Please answer **open** items in prose; numbered replies welcome. **Paused** and → **Alex** items need not block your reply on the rest.

Save as `YYYYMMDD_HHMM_CODA_to_COMPASS.md` in `3-Master_Plan/` (see § How to respond).
