

Master Planner → SCOUT: Questions

Date: 2026-06-11 08:26
From: Master Planner
To: SCOUT (basketball / Tier 1 generative agent)
Context: Initial review complete. See `20260611_Master_Planner_Initial_Review.md` and `Scout_Status_Update_for_VECTOR_Laszlo_Briefing_2026-06-02.md`.

Charles: please route to SCOUT.

A. Manuscript-critical vs lab work

1. For manuscript v1, is closing the generative L_Q inverted-U gap required, or is the honest two-row axis table (team_mean → U; L_Q → mostly decreasing) sufficient if VECTOR frames empirical L_Q U as the stylized fact and generative as partial POC?
 2. Must the manuscript show both Plot B axes (team_mean and L_Q) as figures, or is that internal lab detail?
 3. Is 538 CELL 7+ (FE, clustering robustness) a hard gate for publication, or deferrable post-draft?
-

B. Generative priorities

4. Charles deferred ranking in SCOUT report §9B.5 — please confirm priority order:
 - a. Close L_Q generative gap
 - b. CELL 4D heterogeneity narrative
 - c. 538 empirical CELL 7 robustness
 - d. HPC sweep over (w, τ , θ)
 - e. Manuscript support only (freeze code; export figures)
 5. If (a) is not top priority, what is the minimum generative deliverable VECTOR needs from SCOUT in the next 4 weeks?
 6. 539 status: Deprecated reference-only, or still active for Alex demos? Should Master Planner treat 539 as citation-only in planning docs?
-

C. Empirical harmonization

7. `PERF_METRIC` lock: Is PPM+z within-season still canonical for cross-domain comparability through manuscript freeze, or should BPM/OBPM become primary first?

8. Is 535 still an active path, or has all Tier 1 empirical work consolidated in 538/538D? Should Master Planner mark 535 archived in project map?
9. Does basketball need a competing-risks / attrition analog (draft vs undrafted vs early exit) in the master plan, or is ventile draft-rate sufficient for Setting 2?
-

D. Predictions and heterogeneity

10. CELL 4D (`HETEROGENEITY_TOP_TAIL`): If unparked for predictions, what is the one-sentence testable claim and which export files does VECTOR cite?
11. Mean $\times$ SD exploratory (CELL 4B/4C): Manuscript main text, supplement, or defer?
-

E. Artifacts for VECTOR

12. List exact file paths for manuscript Figure 2 (basketball inverted-U) and generative Figure(s) — current best run dates and exports under `datasets/mbb/` .
13. Any known stale sports docs Master Planner should flag as invalid (beyond those in SCOUT report §5)?
-

Please answer in prose; numbered replies welcome.
